

## TASK 2(Alternative):

Test cases for google.de. I have used Gherkin language for writing test cases. I have implemented below test cases in my automation scripts. Though there can be many test cases but I have tried to accomplish all major actions related to search on google.de

Feature: Google Homepage Search

Scenario: User sees the header

- Given I'm on the homepage
- Then I see the header

Scenario: User can search with "Google Search"

- Given I'm on the homepage
- When I type "random page" into the search field
- And I click the Google Search button
- Then I go to the random page search results

Scenario: User can search with "I'm Feeling Lucky"

- Given I'm on the homepage
- When I type "random page" into the search field
- And I click the I'm Feeling Lucky button
- Then I go to a random page

Scenario: User search goes invalid.

Given I'm on the homepage

When User enters any invalid data for searching.

Then No results found page is reflected.

Scenario: User want to explore all Links shown during search

Given User search something from home page.

When User clicks on the link on the search result page.

Then User is navigated to respective URL.

Scenario: User wants to see Images in search result.

Given User search something from home page.

When. User click on Images Link in header of search result page.

Then. Images are opened related to the search.

Scenario: User wants to navigate to Maps for search result.

Given User search something from home page.

When. User click on Maps Link in header of search result page.

Then. Maps are opened related to the search.

Scenario: User wants to see Videos for search result.

Given User search something from home page.

When. User click on Videos Link in header of search result page.

Then. Videos are opened related to the search.

Scenario: User wants to see News for search result.

Given User search something from home page.

When. User click on News Link in header of search result page.

Then. News are opened related to the search.
